

Background

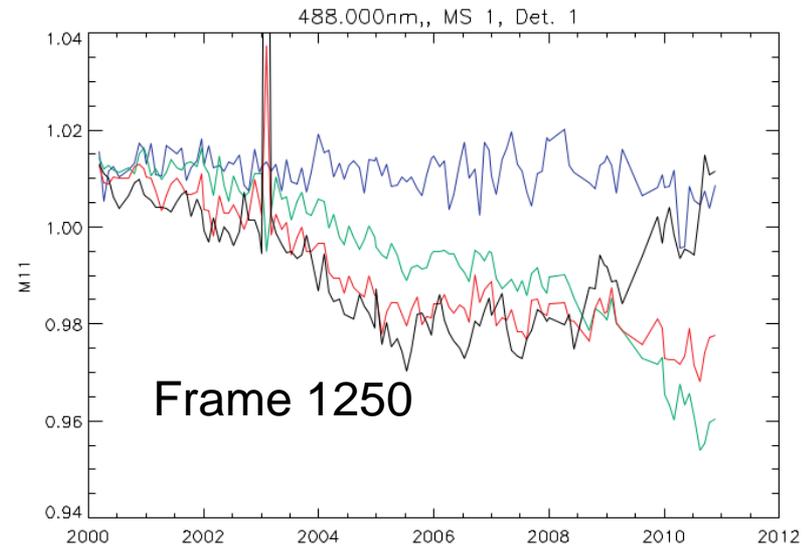

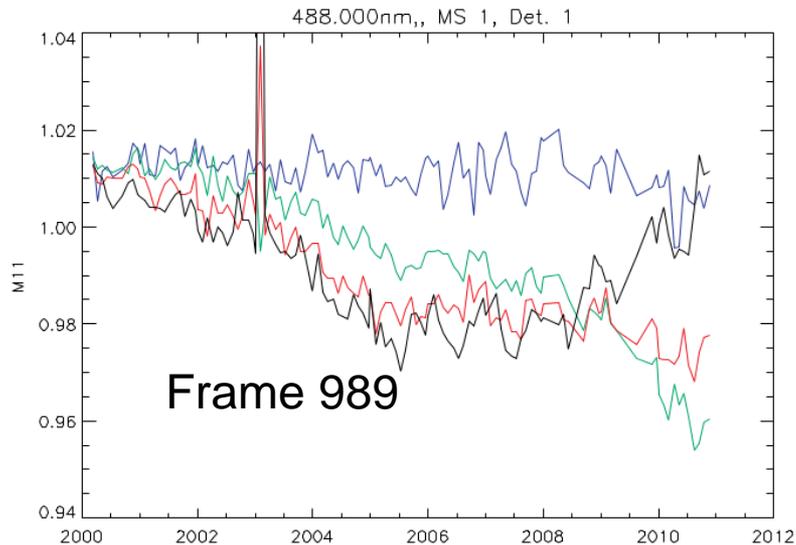

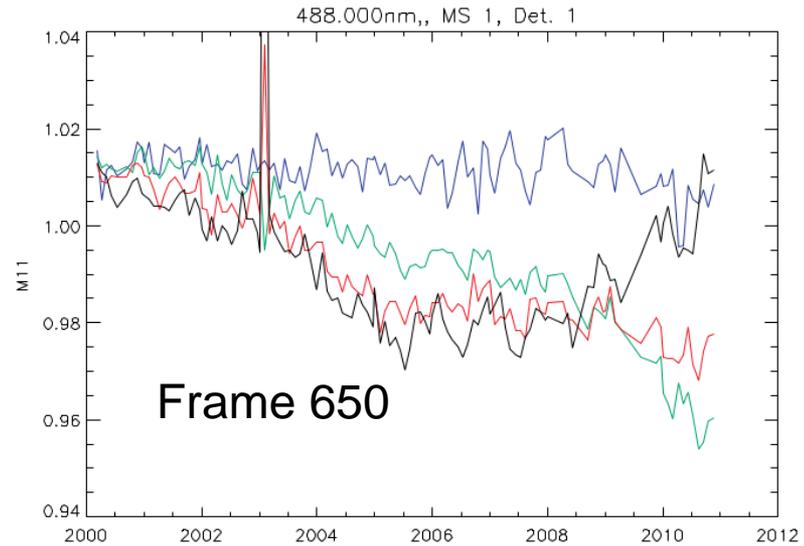

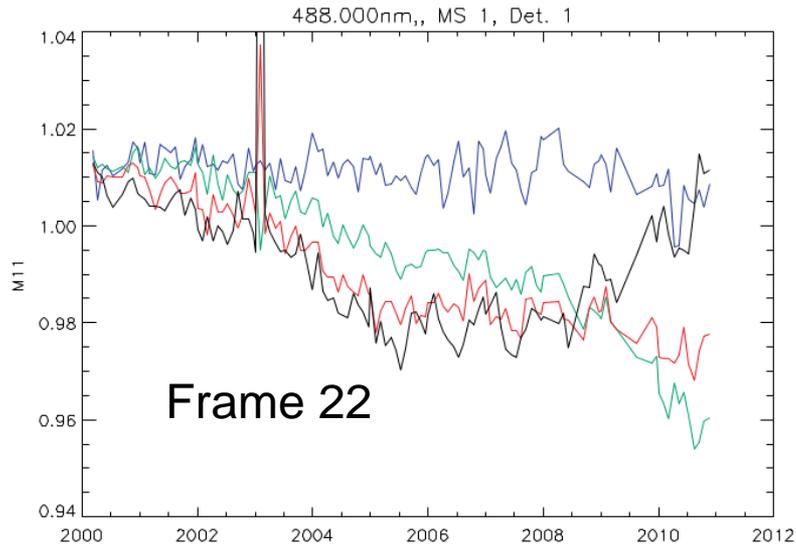

- At the 01/08 MsWG, Gerhard Meister, OBPG presented the test results for the Terra band 10 ocean-color products using the special LUT delivered by MCST
- As a part of this special LUT, the EV-based m1/RVS algorithm (already implemented for bands 8 and 9) was extended to apply to Terra band 10
- The special LUT delivered by MCST produced very similar results to the OBPG correction and OBPG recommended implementing this correction in Collection 6
- A special LUT has been delivered to (with the updated band 10 LUT) to OBPG before the OBPG reprocess
- MCST proposes implementing the modified band 10 approach in the forward Collection 6 processing
 - A gradual implementation (partial incorporation in each LUT update) in the forward C6 is planned to eventually synchronize the OBPG and forward C6 LUT
- Slide 3 shows the expected differences in the C6 L1B as a result of this implementation

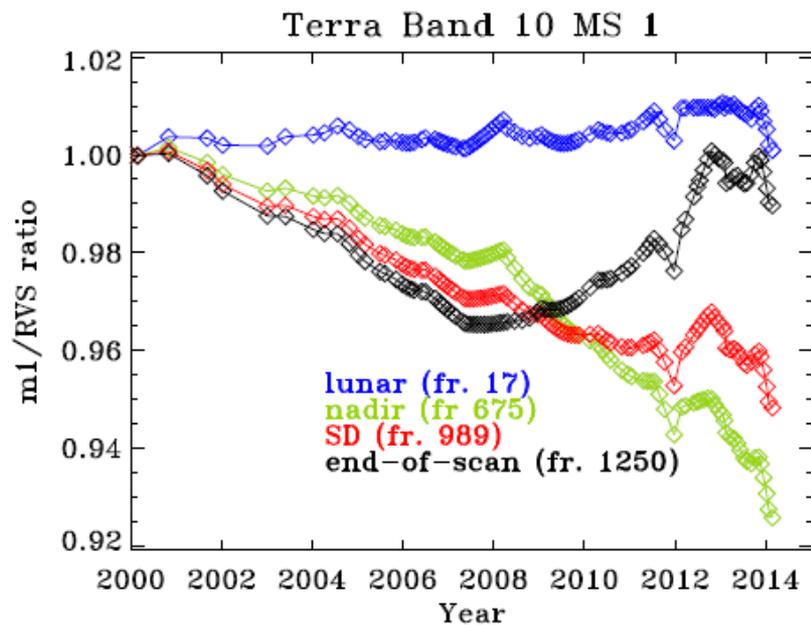

OBPG test results based on MCST LUT
